

Hints

1. Used to dynamically discover the low-level physical network hardware address that corresponds to the high level IP Address for a given host, for instance.
- ~~2.~~ Dynamic Random Access Memory
- ~~3.~~ The main computer system to which users are connected.
- ~~4.~~ A standard character-to-number encoding widely used in the computer industry
- ~~5.~~ Desktop publishing
6. A format originally developed for attaching sounds, images and other media files to electronic mail, but now also used with World Wide Web applications.
- BKBA** 7. Network used to interconnect several networks together.
- ~~8.~~ data is flowing in both directions at the same time
- ~~9.~~ is an international standard for video compression and desktop movie presentation.
- ~~10.~~ The capacity of the transmission medium stated in bits per second or as a frequency.
- ~~11.~~ Encapsulated PostScript
- ~~12.~~ Network Basic Input/Output System
- ~~13.~~ Berkeley Software Distribution. Implementation of the UNIX operating system and its utilities developed and distributed by the University of California at Berkeley.
14. An emerging standard for network technology based on fiber optics that has been established by the American National Standards Institute (ANSI)
- ~~15.~~ A word, number, or symbol that is typed after a command to further specify how the command should function.
- ~~16.~~ Dynamic Host Configuration Protocol
17. The process computers and modems go through in order to establish a connection and agree on the speed and protocols for data transmission.
- ~~18.~~ Software that you can try before you buy.
- C** 19. A general purpose distributed, replicated, data query service. Its principal use is the lookup of host IP addresses based on host names.
20. A chart displaying the tonal ranges present in an image as a series of vertical bars.
